Sea and oceans

Fieldwork is where you go out of the classroom and look at geographical features.

What is a coast?

A coast is a strip of land that meets the sea or ocean. This land could be made of things such as rock, sand, mud or gravel.

What should I already know?

- ◇ We live in the south of England.
- ◇ That The UK is located on the continent of Europe.
- ◇ That a continent is made up of a group of countries.
- ◇ That deserts can be hot.
- ◇ That Antarctica is the coldest place on Earth.

West Wittering

Portsmouth Harbour

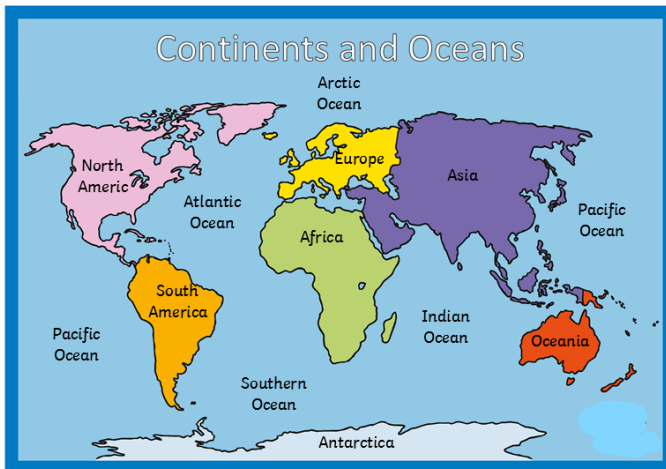

Southsea

Australian beach

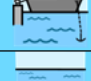

There are different types of beaches. beaches do not all look the same.

Knowledge:

- To name and locate the world's seven continents and five oceans.
- To know that a coast is where the land meets the sea.
- To know that a beach is an area of sand or shingle sloping down to meet the sea.
- To know that beaches do not all look the same.

continent		One of the earth's large land masses.
country		A political unit or state on a national scale.
Europe		Continent containing 47 countries north of Africa and west of Asia.
ocean		A very large stretch of sea, one of five oceans of the world – Pacific, Atlantic, Indian, Arctic and Southern.
beach		An area of sand or shingle sloping down to a sea or lake.
coast		Where lands meets the sea.
sea		Usually smaller than an ocean and typically they are partially enclosed by land.
sand		Sand is a mixture of very small pieces of different rocks or minerals.
shingle		coarse, rounded rock material (fragments such as pebbles and gravel) that is usually found in coastal areas.
cliff		A steep rock face along the coast.
harbour		A place on the coast where boats may moor to shelter.
port		A large harbour or place along a coast where ships are loaded and unloaded.
marine		describes oceans and seas, where water is salty
